

NuPower II - Drywash (painted or polished surface)

Nuvite's NuPower II is an extraordinary product for ongoing care of painted or polished metal surfaces. It is easily applied with a wipe-on, agitate, let dry then wipe-off procedure with pad applicators or by hand in all types of humidity conditions. Nu-Power II is a high-technology formulation that offers cleaning power, a bright shine, and a protective barrier coating against surface oxidation that also protects against ultraviolet deterioration. Nu Power II is highly recommended to help offset the deleterious effects of de-icing fluids on a painted (or bare metal) substrate. Because NuPower II is so easy and fast to use, it offers significant savings in labor and retains maximum appearance protection and performance in both fleet and heavy service situations.
