

# NuShine II Metal Polish System

Many owners of commercial, corporate and antique show aircraft specify NuShine II as the polish of their choice for the continuing upkeep of their expensive aircraft. In addition, NuShine II is the polish of choice for Airstream Trailer owners, since Airstreams are also made with Aluminium.

NuShine II is available in the following grades:

## Finishing Grades

**Grade S:** The Finishing Grade that gives the really deep, clear image when used as a final finish over a properly prepared, oxidation free surface. Final Finish Only, Polish Upkeep, Paint Finishing.

**Grade A:** Medium Finish Grade for Light Oxidation Removal. Also useful for Hand Polishing in Tight areas where buffers cannot reach. Will give good finishes the good, bright look similar to commercial grade polishes, but should still be followed by Grade S to get the spectacular "NuShine Look".

## Compounding Grades

**Grade C:** Cutting Grade polish that we recommend to prep before using Grade S for final finish. Light Oxidation Removal, good shine, polish reconditioning. Removes the cloudy/hazy white background (called "undercast") found in many otherwise good polish finishes.

**Grade G6:** "Smart Abrasive" – Has a hi-tech media system that is designed to do a quick, aggressive oxidation cut, and immediately breaking down to a finer action similar to Grade C. Use when there is normal to serious oxidation on the surface of the aluminium. Can also be used to blend surface scratches in aluminium and will polish stainless steel.

**Grade F7:** Heavy Oxidation Removal, corrosion, pits or scratches from aluminium, stretch formed aluminium, polishing new, non-clad aluminium, or for polishing stainless steel or titanium. Best to follow F7 with C and then Grade S

**Grade F9:** Heavy Cut, for Clad or Non-Clad Aluminium, Forged or Cast Parts. Also used where the aluminium surface has been damaged by stripping processes of paint, sanded or scratched by abrasive cloth. Best to follow with G6 or C for further surface preparation, before final finish with S. Like Grade F7, Grade F9 in the "F" series of Grades also polishes Titanium.
