Aerospace Wiping Cloth

#1 in Aerospace and Boeing's wiping product of choice for 50 years, RYMPLECLOTH® is manufactured from **100% cotton purified cotton fibers and contains no silicone**. It is a 3ply cloth which is widely used in the aerospace industry. Its cotton fibers are of high quality and are low-linting and non-abrasive. *Rymplecloth®* is one of the most durable products available for cleaning and polishing and is strong enough to withstand industrial wiping and polishing with a variety of cleaning solvents. The unique crimped finish gives *Rymplecloth®* more surface area for collecting and trapping dirt particles. In addition, the cloth's super soft texture and stretchable construction give it excellent surface conformity and memory. Firmly twisted yarns and open weave also help eliminate foreign particles on the surface of the cloth by absorbing these particles into the open cell construction. One of the most durable products available for cleaning and polishing. AFF's controlled and unique purification process produces a very absorbent wiper that is compatible with cleaning solvents. Applications include:

- Aerospace - composites, bonding, painting, fuel cells, and transparencies (cleaning and polishing)
- Aviation – cleaning of aircraft airframes, engines, windows
- Industrial – Cleaning and polishing composite molds and preparation prior to painting and bonding
- Food & Pharmaceutical – Various applications including filtration and straining

RYMPLECLOTH® is packaged in:
Pre-cut pieces per roll/12 rolls per case
OR
Continuous Roll/12 rolls per case

RYMPLECLOTH® meets or exceeds AMS 3819B (Supersedes BMS 15-5F)
